

Why be unhappy with the way you look and feel at your most intimate moments?

Now there is a safe, non-surgical solution to enhance, rejuvenate and help you feel your best —

beautiful,
sensual, and self-assured.

Laura Casewell, editor of the Cosmetic Surgery Guide magazine, says:

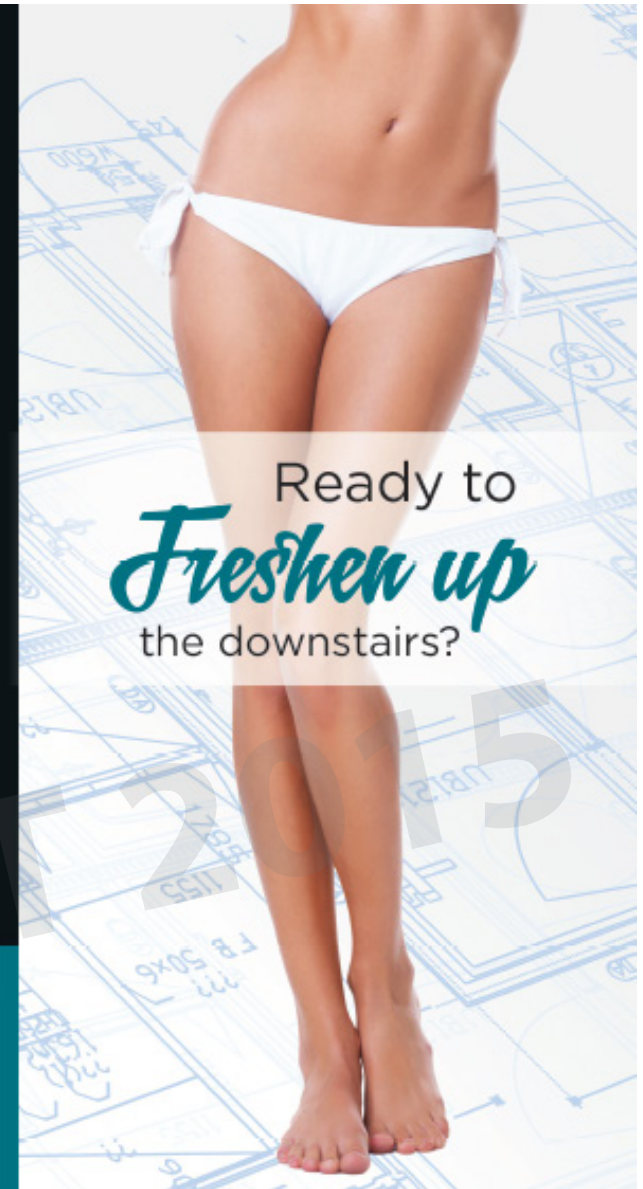

"The advances in most non-invasive cosmetic treatments have been astonishing in the last few years... The days of surgical labia correction may be numbered now that Intima Treatment... is offering such outstanding results without the need for knives or needles."

Cosmetic treatments have improved the lives of thousands of women for decades, giving them a brighter, more positive outlook on life. One area has yet to receive enough attention. For women who are unhappy with their vaginal appearance, the choices have been limited.

Until now... Thanks to non-surgical Intima treatments, there is a way to rejuvenate your labia and regain confidence for intimate contact.

Renew your confidence and improve your quality of life with the Intima treatment!

Thanks to the Intima™ technology, women are regaining confidence with labia remodeling. Consider the following benefits associated with this non-invasive treatment:

- Non-surgical
- No pain, no downtime
- No anesthesia or needles needed
- Results seen as early as two treatments
- A treatment for all skin types
- Minimal risk of side effects

What is the Intima treatment?

Intima is an FDA-approved device utilizing radio frequency (RF). RF thermally excites the fibroblast and subcutaneous structures of the skin. The body's natural healing process will produce new collagen fibers. The localized deep heating of the labia and vaginal entrance increases blood flow to surrounding tissue and may lead to an increase in sexual satisfaction.

What are the benefits of the Intima treatment?

Results of a clinical trial found that 80% of women reported "significant to excellent" improvement in the appearance of their labia and most women reported improvement in sexual satisfaction.

Will I feel any pain during treatment?

Intima treatments are virtually painless and require no local anesthesia. Patients describe it as a very warm and easily tolerated procedure.

What is the recovery time after Intima?

After Intima treatments moderate swelling may occur. Most patients are able to return to work without any downtime necessary.

What are the results and how long do the results last?

Within several weeks, gradual improvement is noticed. Collagen remodeling takes time but is long lasting.

How soon will I begin seeing results? How many treatments will I need to achieve my desired results?

After just two visits, you may see the effects of the treatment. Most women need 4 - 6 treatments, with the results reaching their full effect in 3 - 6 months after the last treatment.

Women around the world are regaining confidence with labial remodeling, you can too!

In a study of the use of non-invasive, non-surgical RF treatment for labial remodeling, Dr. Zuzana Fuciková found, *"The Intima Treatment... is a safe and effective device for non-invasive, non-surgical labial remodeling. The use of the device leads to the improvement of the appearance of the vulva and to the improvement of sexual satisfaction."*
